CROWE'S SAWMILLS LTD

A GREAT RANGE OF DECKING PRODUCTS

Gardens are more and more being seen as an extension of the home and decking is the ideal way to provide additional living space and a link between home and garden. Decking provides an ideal haven for rest, relaxation and a way to experience the great outdoors, whether enjoying the sun, gardening or entertaining. The colour and texture of wood blends in with all elements in your garden as well as being a stunning structural addition to the home.

Crowes Sawmills provide an extensive range of decking products from decking boards through to hand rail systems. The design, use and size of a deck are only limited by your imagination. Timber used in the manufacture of timber decking products is sourced from well managed and renewable resources and is certified by the Forest Steward Council. Osmose Naturewood Timber has been

preserved with Osmose copper-based preservatives for external applications both in-ground contact and out-of-ground contact. Alkaline copper quaternary systems have provided proven performance for a decade in locations throughout Europe, North America, Australia and Japan. Osmose Naturewood is an ideal choice for fencing, timber decking, landscaping timbers, playground equipment and construction timbers.

OSMOSE NATUREWOOD

What is Osmose Naturewood preserved timber?

Osmose Naturewood preserved wood is the name given to timber that has been preserved with an Osmose preservative system which is based on copper and an organic co-biocide (Alkaline Copper Quaternary). Alkaline Copper Quaternary systems have provided proven performance for over a decade in locations throughout Europe, North America, Australia and Japan. Osmose Naturewood preserved wood can be used for fencing, timber decking, landscaping timbers and construction timbers.

Appearance of Osmose Naturewood

Osmose Naturewood products will initially have a green appearance that highlights the natural variations of the wood; this will weather to an attractive natural honey brown colour before finally fading to a driftwood grey after long term exposure to the sun.

Osmose Naturewood products can be stained to match any outdoor colour scheme. Always follow manufacturer's recommendations.

Frequently Asked Questions

Q...Are Naturewood treated products tried and tested?

- Comprehensive field data, over 15 years in ground contact.
- The world market leader, already well established around the globe (eg. USA, Scandinavia, Germany, New Zealand, Australia, Japan etc).
- The preservatives in Naturewood treated wood, copper and quaternary compounds provide proven protection against fungal decay, wood destroying insects and termite attack.

Q...Do Osmose Naturewood products comply with standards?

Osmose Naturewood products comply with the relevant British and European Standards including the new BS8417, the Australian Quarantine and Inspection Service (AQIS) requirements and the Highways Agency specification for fencing and noise barriers.

Q...What is the expected service life of Osmose Naturewood products?

Formulations developed as alternatives to CCA are applied in accordance with the recent European Standards regime, rather than by using the more traditional British Standards criteria. The following Desired Service Life categories from the new BS8417 therefore apply to Osmose Naturewood products -

- Components in Use Class 1 & 2 60 years
- Components in Use Class 3 15 and 30 years
- Components in Use Class 4 15 and 30 years
(Dependent on the particular species being treated)

USE CLASS TABLE	
Use Class (UC)	Use
1	Above ground, covered.
2	Above ground, covered.
3a	Above ground, coated.
3b	Above ground, uncoated. Exposed to frequent wetting.
4	In contact with ground or fresh water. Permanently exposed to wetting.

Use An End Coat Preservative

Any surface exposed by drilling or cutting must be coated with a cut end preservative. Failure to coat will affect the value of the preservative. It is recommended that the coated ends are not put in the ground or in direct contact with water. Rip sawing, thickening and planing are not permitted unless the timber is subsequently processed to the original specification.

The Osmose Naturewood Preservative Process

For Important Information on Osmose Naturewood visit www.osmose-europe.com

CROWE'S SAWMILLS LTD

A GREAT RANGE OF DECKING PRODUCTS

Gardens are more and more being seen as an extension of the home and decking is the ideal way to provide additional living space and a link between home and garden. Decking provides an ideal haven for rest, relaxation and a way to experience the great outdoors, whether enjoying the sun, gardening or entertaining. The colour and texture of wood blends in with all elements in your garden as well as being a stunning structural addition to the home.

Crowes Sawmills provide an extensive range of decking products from decking boards through to hand rail systems. The design, use and size of a deck are only limited by your imagination. Timber used in the manufacture of timber decking products is sourced from well managed and renewable resources and is certified by the Forest Steward Council. Osmose Naturewood Timber has been

preserved with Osmose copper-based preservatives for external applications both in-ground contact and out-of-ground contact. Alkaline copper quaternary systems have provided proven performance for a decade in locations throughout Europe, North America, Australia and Japan. Osmose Naturewood is an ideal choice for fencing, timber decking, landscaping timbers, playground equipment and construction timbers.

OSMOSE NATUREWOOD

What is Osmose Naturewood preserved timber?

Osmose Naturewood preserved wood is the name given to timber that has been preserved with an Osmose preservative system which is based on copper and an organic co-biocide (Alkaline Copper Quaternary). Alkaline Copper Quaternary systems have provided proven performance for over a decade in locations throughout Europe, North America, Australia and Japan. Osmose Naturewood preserved wood can be used for fencing, timber decking, landscaping timbers and construction timbers.

Appearance of Osmose Naturewood

Osmose Naturewood products will initially have a green appearance that highlights the natural variations of the wood; this will weather to an attractive natural honey brown colour before finally fading to a driftwood grey after long term exposure to the sun.

Osmose Naturewood products can be stained to match any outdoor colour scheme. Always follow manufacturer's recommendations.

Frequently Asked Questions

Q...Are Naturewood treated products tried and tested?

- Comprehensive field data, over 15 years in ground contact.
- The world market leader, already well established around the globe (eg. USA, Scandinavia, Germany, New Zealand, Australia, Japan etc).
- The preservatives in Naturewood treated wood, copper and quaternary compounds provide proven protection against fungal decay, wood destroying insects and termite attack.

Q...Do Osmose Naturewood products comply with standards?

Osmose Naturewood products comply with the relevant British and European Standards including the new BS8417, the Australian Quarantine and Inspection Service (AQIS) requirements and the Highways Agency specification for fencing and noise barriers.

Q...What is the expected service life of Osmose Naturewood products?

Formulations developed as alternatives to CCA are applied in accordance with the recent European Standards regime, rather than by using the more traditional British Standards criteria. The following Desired Service Life categories from the new BS8417 therefore apply to Osmose Naturewood products -

- Components in Use Class 1 & 2 60 years
- Components in Use Class 3 15 and 30 years
- Components in Use Class 4 15 and 30 years
(Dependent on the particular species being treated)

USE CLASS TABLE	
Use Class (UC)	Use
1	Above ground, covered.
2	Above ground, covered.
3a	Above ground, coated.
3b	Above ground, uncoated. Exposed to frequent wetting.
4	In contact with ground or fresh water. Permanently exposed to wetting.

Use An End Coat Preservative

Any surface exposed by drilling or cutting must be coated with a cut end preservative. Failure to coat will affect the value of the preservative. It is recommended that the coated ends are not put in the ground or in direct contact with water. Rip sawing, thickening and planing are not permitted unless the timber is subsequently processed to the original specification.

OSMOSE NATUREWOOD

What is Osmose Naturewood preserved timber?

Osmose Naturewood preserved wood is the name given to timber that has been preserved with an Osmose preservative system which is based on copper and an organic co-biocide (Alkaline Copper Quaternary). Alkaline Copper Quaternary systems have provided proven performance for over a decade in locations throughout Europe, North America, Australia and Japan.

Osmose Naturewood preserved wood can be used for fencing, timber decking, landscaping timbers and construction timbers.

Appearance of Osmose Naturewood

Osmose Naturewood products will initially have a green appearance that highlights the natural variations of the wood; this will weather to an attractive natural honey brown colour before finally fading to a driftwood grey after long term exposure to the sun.

Osmose Naturewood products can be stained to match any outdoor colour scheme. Always follow manufacturer's recommendations.

Frequently Asked Questions

Q...Are Naturewood treated products tried and tested?

- Comprehensive field data, over 15 years in ground contact.
- The world market leader, already well established around the globe (eg. USA, Scandinavia, Germany, New Zealand, Australia, Japan etc).
- The preservatives in Naturewood treated wood, copper and quaternary compounds provide proven protection against fungal decay, wood destroying insects and termite attack.

Q...Do Osmose Naturewood products comply with standards?

Osmose Naturewood products comply with the relevant British and European Standards including the new BS8417, the Australian Quarantine and Inspection Service (AQIS) requirements and the Highways Agency specification for fencing and noise barriers.

Q...What is the expected service life of Osmose Naturewood products?

Formulations developed as alternatives to CCA are applied in accordance with the recent European Standards regime, rather than by using the more traditional British Standards criteria. The following Desired Service Life categories from the new BS8417 therefore apply to Osmose Naturewood products -

- Components in Use Class 1 & 2 60 years
 - Components in Use Class 3 15 and 30 years
 - Components in Use Class 4 15 and 30 years
- (Dependent on the particular species being treated)

USE CLASS TABLE

Use Class (UC)	Use
1	Above ground, covered.
2	Above ground, covered.
3a	Above ground, coated.
3b	Above ground, uncoated. Exposed to frequent wetting.
4	In contact with ground or fresh water. Permanently exposed to wetting. 

Use An End Coat Preservative

Any surface exposed by drilling or cutting must be coated with a cut end preservative. Failure to coat will affect the value of the preservative. It is recommended that the coated ends are not put in the ground or in direct contact with water. Rip sawing, thicknessing and planing are not permitted unless the timber is subsequently processed to the original specification.

The Osmose Naturewood Preservative Process

The timber is transferred into the treatment vessel.

A vacuum pulls the air out of the vessel and the timber.

Osmose Naturewood preservative fills the vessel.

The vessel is pressurised forcing Osmose Naturewood preservative into the timber.

The preservative is removed and final vacuum is applied to remove excess.

The timber has now been preserved with Osmose Naturewood preservative.
